

Amendments to the Specification:

Please amend paragraph **0054** on page 7 to read as follows:

[0054] A collar 52 is fitted around a pin 54, which collar 52 locks into the paddle opening 50. By pulling the collar 52 outwardly against the biasing element, e.g., spring 56, the paddle 38 is unlocked and can be pivoted with the pin portion 54 of the locking pin assembly 46 traversing through the notched opening 50. In the closed path position, the paddle 38 is locked in place by the collar 52 fitting into an enlarged portion ~~58~~ 59 of the elongated opening 50. By pulling the collar 52 outwardly, away from the paddle 38, the collar 52 is released from the paddle 38 and the paddle 38 can be pivoted such that the pin portion 54 traverses through the elongated opening 50. The inner paddle 38 is thus moved to the open chute position.
